

# Attivio Modules

## Overview

The Attivio platform is designed to be a scalable platform in terms of document and query capacity. In addition, the deployment and run time [footprint](#) of the system can be scaled from a bare-bones information retrieval toolkit to a full featured [unified information access](#) platform. Developers can choose which [modules](#) to install or which modules to use based on their specific business requirements.

Modules are added to or removed from Attivio installations using the [aie-exec modulemanager](#) tool, and are added to Attivio projects using the [create project](#) tool.

## Module Descriptions

Most of the modules below are shipped with every Attivio installation.

Certain Attivio modules are not distributed with Attivio because they are too big, are priced separately, or have other requirements that make them unsuitable for general distribution. These modules are listed as "downloads" in the table below. Please refer to the [Add-on Modules](#) page for more information on installing these modules.

Module Name	Module Type	Included in Group (s)	Description / Links
advancedtextextraction	Standard	<a href="#">default and demo</a>	<a href="#">Advanced Text Extraction Module</a>
alm	Standard	<a href="#">demo</a>	<a href="#">Advanced Linguistics Module</a> Provides advanced linguistics support for English. Included in 5.6.x installer; a newer version can be installed if available.
alm-languages	Download	<a href="#">demo</a>	<a href="#">Advanced Linguistics Module</a>  Additional license required.
